In this video of code decode we will figure out if `String s = "hello"; String t = s; s = "world";` `t` prints "hello" or "world". This is a classic interview question. The answer is "hello" because strings are immutable in Java. When you assign a string to a variable, you are actually pointing to a memory location. If you change the string, you are creating a new object in memory. The original object remains unchanged. This is why `t` still points to the original "hello" object.
