We find a basis for the eigenspace when λ equals 3. This is the same as finding a basis for the Null Space of $A - \lambda I$. We work through an example that has We find the characteristic equations of A , $\det(A - \lambda I) = 0$. The solutions of this equation are the We check if a vector is in $\text{Nul } A$ or $\text{Col } A$. We defined what it means for a vector to be an Eigenvector of a matrix. We then did some basic examples. We diagonalize the matrix A . We do this by finding
